

## Flexible Procedure for Different Vehicle Types

## Special Vehicle Construction Where Wishes Come True

In the field of vehicle protection, ThyssenKrupp Drauz Nothelfer special vehicle construction offers a concept of protection against external threats such as bullets and explosives which is tailored to the needs of our customers.

When implementing the protective measures, ThyssenKrupp Drauz Nothelfer relies on staff which have been with us for many years and accordingly have a treasury of experience and production know-how. Additionally, we profit from the knowledge of the steel development experts within the ThyssenKrupp group. The safety materials used such as steel and glass are most strictly controlled for each individual vehicle, proved in shooting tests and documented.

The special vehicle construction division works out and tests all special protection concepts in-house and guarantees strictest confidence.

Of course, any protection measure may also be combined with other individual changes the customer desires, for instance stretching including appropriate protection against bullets.

You have questions? We will be happy to answer them. We will make your wishes come true as a partner to the automotive industry.

## ThyssenKrupp Drauz Nothelfer Specialist for Special Needs

The special vehicle construction division at Weinsberg is a special product area of ThyssenKrupp Drauz Nothelfer GmbH which has made it its business to fulfil special customer requests with regard to motor vehicles.

The special vehicle construction product range includes everything from made-to-order production of complete vehicles to innovative manufacture of whole small series. Additionally, the special vehicle construction division makes individual changes to series production vehicles. From stretching a vehicle or making it higher to fancy interior designs to special protection measures against external threats such as attacks with explosives almost any special request can be met here at ThyssenKrupp Drauz Nothelfer.

## We Provide Individuality

A field in which the special vehicle construction division is active is the conversion of series and special vehicles, and it doesn't matter what vehicle it is.

If you like to have it bigger or more secure, then ThyssenKrupp Drauz Nothelfer is the place to go. In the field of special conversions, the body specialist is one of the few suppliers that can look back to many years of experience with body construction and combines competence and process under a single roof.

No matter what kind of modification you wish to have, from individual painting to changes of the interior, vehicle stretching, increased height or armoured, anything goes.

## We Offer New Dimensions

The stretching of vehicles is a frequent modification. The numerous reference projects and examinations have shown that any motor vehicle can be stretched.

ThyssenKrupp Drauz Nothelfer stretches vehicles in many different ways. For example, you can extend the doors individually or integrate an additional centre door as with the legendary Pullman or broaden the C column including the back doors or do a combination of all this.

A vehicle's height may also be increased. In the example below, a BMW E67 was provided with a 120 mm higher roof and appropriately supplemented with the necessary special protection measures.
